

Hackathon Datasets (CSV Only)

Every dataset below offers a direct CSV download, and every link was checked live against its portal (not just search results) to confirm it's active and not retired.

1. Food Waste Redistribution

Toronto

- [Dinesafe](#) — every food establishment in the city with inspection status; CSV export available.

Montreal

- [Matières résiduelles - bilan massique](#) — annual mass balance of waste categories (incl. organics/food waste) generated and collected, in CSV.

Canada

- [Biomass Municipal Solid Waste Inventory](#) — CSV of organic/food waste volumes by grid cell nationally.

Hugging Face

- [IshaanPottle27/global-food-supply-chain-models-and-data](#) — CSV, global food supply chain data (production, transport cost, disruption events) plus feature-engineered versions. Useful for modelling where surplus/waste occurs in the chain.
 - [Lauriegg/gdelt-food-security-data](#) — CSV, daily GDELT news events tagged for food security (large: ~30 files, 15–50MB each). Useful for spotting food-insecurity hotspots to prioritize redistribution.
 - Note: no dedicated "food bank" or "surplus food donation" CSV dataset exists on Hugging Face — the two above are the closest clean, real fits.
-

2. Elderly Care Coordination

Toronto

- [Long-Term Care Locations, City Operated](#) — CSV of geocoded LTC homes.
- [Retirement Homes](#) — CSV of locations + bed capacity.

Montreal

- [Lieux et bâtiments à vocation publique](#) — CSV of public venues, including accessibility/service fields useful for senior-serving locations.

Canada

- [Open Database of Healthcare Facilities \(ODHF\)](#) — raw CSV of ~7,000 facilities across Canada, including nursing/residential care.

Hugging Face

- [ekrombouts/dutch_nursing_home_notes](#) — single CSV (~6MB), synthetic nursing-home client care notes. Good for NLP-driven care-note summarization/triage. Caveat: Dutch language, synthetic data.

- Note: this track is thin on Hugging Face — no real, clean "elderly care coordination/caregiving" tabular dataset was found. Consider pairing the Toronto/Canada facility datasets above with the note-summarization dataset for an NLP angle.
-

3. Accessibility Assistant for Public Services

Toronto

- [Corporate Real Estate Management Portfolio Washrooms](#) — CSV of public washroom locations with accessibility/gender-neutral fields.
- [Off-Street Parking – Surface Lots – Accessible Stalls](#) — CSV of accessible parking stall locations.

Montreal

- [Lieux et bâtiments à vocation publique](#) — CSV, tagged with wheelchair access, elevators, sign-language interpreters, accessible washrooms, etc.

Canada

- [Presence of Barriers to Accessibility for Persons with Disabilities \(15+\), by Province/Territory](#) — CSV.
- [Accessibility Barriers When Interacting with Federal Sector Organizations](#) — CSV.
- [Barriers to Accessibility Related to Programs and Services](#) — CSV.

Hugging Face

- [electricssheepafrica/population-with-severe-disabilities-receiving-disability-cash-for-african-countries](#) — small CSV, real WHO SDG indicator data (disability cash-benefit coverage by country).
 - [electricssheepafrica/africa-synth-disability-assistive-technology-access-all](#) — CSV, assistive-technology access/coverage data. Caveat: clearly labelled synthetic, parameterized from published literature — good for prototyping, not for real policy claims.
-

4. Climate Emergency Response Assistant

Toronto

- [Current and Future Climate](#) — CSV of 53 climate variables, two emissions scenarios, three future time periods.
- [TransformTO Net Zero Strategy – Resident Survey](#) — CSV of raw survey data.

Montreal

- [Émissions de gaz à effet de serre de la collectivité montréalaise](#) — CSV, GHG emissions by sector/category, annual since tracking began.

Canada

- No dataset on open.canada.ca offers direct CSV for climate/flood risk — the flood susceptibility and extreme weather attribution datasets are geospatial (WMS/COG/STAC) only. Lean on the Toronto and Montreal CSVs above for this track.

Hugging Face

- [melisekm/natural-disasters-from-social-media](#) — CSV train/test/validation splits; real, well-documented dataset aggregating major academic disaster-response corpora (CrisisMMD, HumAID, CrisisLexT26, and more). Strong fit for triaging emergency social-media reports.
 - [electricsheepafrica/Climate-Change-Indicators-For-African-Countries](#) — CSV per country, real World Bank climate indicators, 1960–2024.
-

5. Job Search and Career Transition Support

Toronto

- [Toronto's Dashboard Key Indicators](#) — CSV of city economic/employment indicators (Economy, Revenues, Community Vulnerability, etc.), updated daily.

Montreal

- [Offres d'emploi et postulation](#) — CSV of actual City of Montreal job postings + application stats by applicant group.
- [Diversité en emploi à la Ville de Montréal](#) — CSV, representation/hiring by group.

Canada

- [Job Postings Advertised on Canada's National Job Bank](#) — monthly CSV files, occupation/salary/vacancy data. Strongest single dataset for this track.
- [Wages by Occupation \(NOC\) and Region](#) — yearly CSV.
- [Canadian Occupational Projection System \(COPS\), 2024–2033](#) — CSV, labour shortage/surplus projections by occupation.
- [3-Year Employment Outlooks](#) — CSV for most years (recent years also ship as XLSX).

Hugging Face

- [xanderios/linkedin-job-postings](#) — single large CSV (~135MB) of real LinkedIn job postings.
 - [fact-den/indeed-job-postings-2026](#) — CSV, real Indeed postings with parsed salaries + company firmographics, refreshed 2026.
 - [mindweave/job-postings-applications](#) — six linked CSVs (jobs, applications, candidates, interviews, offers, companies). Synthetic but realistic — best option here for building a full application-tracking/matching demo.
-

6. Medical Appointment Coordination

Toronto

- [Outbreaks in Toronto Healthcare Institutions](#) — CSV by year (2016–2026), lists hospitals, long-term care homes, and retirement homes with outbreak status; usable as a facility-location dataset.

Montreal

- [Fichiers cartographiques M02 des installations et établissements](#) (Données Québec, covers Montreal) — CSV lists of health establishments and installations (CLSC/CIUSSS included) province-wide.

Canada

- [Open Database of Healthcare Facilities \(ODHF\)](#) — raw CSV, hospitals/ambulatory/nursing facilities nationwide with names, types, locations.
- [Median Waiting Times for Specialized Services](#) — CSV.

Hugging Face

- [Pollicy/Uganda HealthCare Facilities](#) — CSV, 6,000+ real healthcare facilities (collected from Uganda's Ministry of Health list + Google Maps enrichment).
- Note: the well-known "Medical Appointment No-Shows" dataset (Kaggle) has no clean CSV mirror on Hugging Face — no dedicated appointment-scheduling/no-show dataset was found there.
